Security incident report

Section 1: Identify the network protocol involved in the incident
DNS (Domain Name System): to find the IP address of (yummyrecipesforme.com and greatrecipesforme.com) TCP (Transmission Control Protocol): Used to establish a reliable connection between the user's machine and the web servers on port 80. HTTP (Hypertext Transfer Protocol): Used to request and deliver web pages (HTTP: GET / HTTP/1.1) and facilitate the download of the malicious executable file.

Section 2: Document the incident
DNS Resolution for Primary Domain: At 14:18:32, your.machine.52444 initiated a DNS query to dns.google.domain requesting the IP address for yummyrecipesforme.com. The DNS server responded with the IP address 203.0.113.22. Network Connection and HTTP Request to Primary Domain: At 14:18:36, your.machine.36086 established a TCP connection with yummyrecipesforme.com. After establishing a TCP connection via port 80 using standard flags ([S], [S.], [.]), the client issued an HTTP GET / HTTP/1.1 request. Due to prior source code tampering, the server's HTTP response executed the injected JavaScript, initiating the unauthorized file download containing the payload. DNS Resolution for Secondary Domain: At 14:20:32, your.machine.52444 initiated a second DNS query to dns.google.domain for greatrecipesforme.com.

The DNS server responded with the IP address 192.0.2.17. Network Connection and HTTP Request to Secondary Domain:
At 14:25:29, your.machine.56378 initiated a TCP handshake and subsequent HTTP GET request targeting greatrecipesforme.com.http on port 80.

Section 3: Recommend one remediation for brute force attacks
Enforce Multi-Factor Authentication (MFA) / Two-Factor Authentication (2FA) and Account Lockout Policies.
